1. The disclosure is objected to because of the following informalities: the specification should be updated with respect to related applications listed in the file at pages 1-2.

Appropriate correction is required.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-4 and 14-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Babitch et al.

Babitch et al (2005/0162306) disclose an integrated GPS/communication device for acquiring and tracking GPS signals wherein the device, See Figure 9, attempts to maintain frequency coherency with the received GPS signal so as to perform conventional GPS processing, i.e. acquisition of GPS signals and the subsequent determination of position using a plurality of pseudorange signals. Additionally, it is taught “Determining and estimating frequency changes over time and adjusting the local frequency source appropriately allows tracking over a longer period of time, enabling longer integration times to capture weaker signals without losing frequency coherence.” The section “Reference Oscillator Frequency Correction” starting at [0083] describes the estimation of the clock signal acceleration, that is the rate of change of the frequency error, and its subsequent use in the positioning receiver.

4. Claims 5-10 and 18-23 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

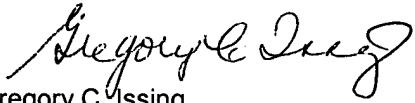

5. Applicant's election without traverse of claims 11-13 and 24-26 in the reply filed on 11/16/05 is acknowledged.
